

Education, Simplified

Today's students want to learn anytime, anywhere, on any device.
Teachers and administrators want to innovate faster than ever.
And **everyone** wants to collaborate without boundaries.

How would it look if everything they needed lived in your LMS?

- Cisco Webex would seamlessly integrate into systems like Blackboard, Canvas, D2L, Moodle, and Sakai
- Teachers, administrators, and students would access lectures, assignments, and everything else they need in one location
- Collaboration via voice, video, chat, and file sharing would run on the same platform as all academic and administrative functions

Teachers and administrators:
log in, schedule classes, and sync calendars with a single click.

Students: attend lectures in a virtual classroom or watch recorded lectures when it's convenient.

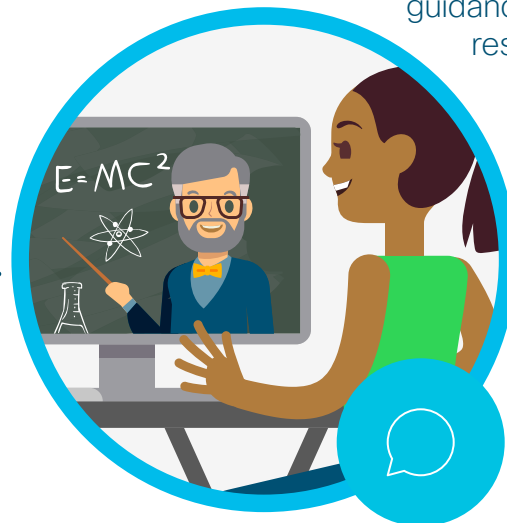

Teachers and administrators:
organize students into groups in Cisco Webex Teams™ in seconds so they can collaborate on projects.

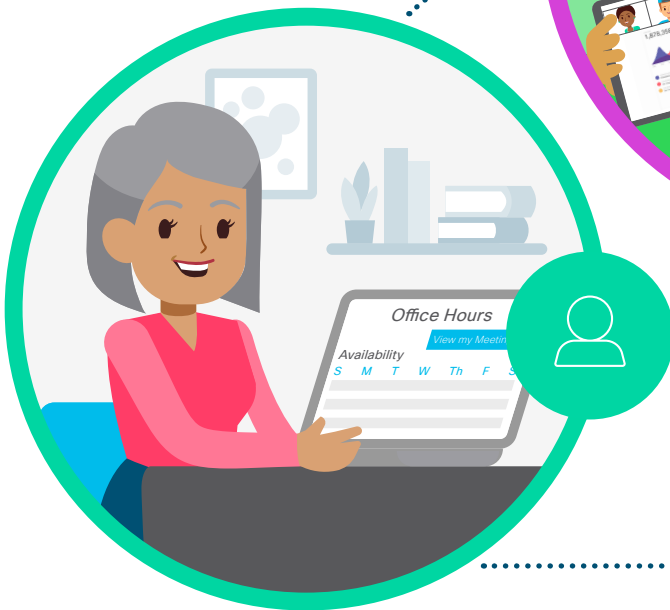

Students: collaborate via desktop, video device, tablet, or smartphone anywhere you go—on campus or off.

Teachers: bring in outside experts from anywhere to offer guidance and share resources.

Teachers: hold virtual office hours wherever and whenever works for your schedule.

Connected learning just got easier.

Want to see how Cisco is helping K-12, colleges, and universities reimagine the possibilities for education?
